Rectangular pupils allow for a wide field of vision, around 270 to 320 degrees. This means that sheep can see almost everything around them, except for what's directly behind them, without having to turn their heads!

Despite some popular beliefs, sheep are intelligent animals with great memories. Research has shown that sheep can recognize up to 50 other sheep faces, and remember them for two years. They are even able to recognize human faces! Other studies have shown that sheep are capable of remembering how to navigate complex mazes.

Sheep are capable of experiencing a wide range of emotions, just as humans do. Many studies have highlighted the ability of sheep to feel afraid, angry, bored, sad, and happy. Not only are sheep able to feel basic emotions, but their feelings can be very complex. For example, scientific studies have shown that sheep can be pessimists or optimists!
