

Swan Hill Regional Livestock Exchange

Prime Cattle Sale 8th of September 2022

Total Yarding of **602** head

Cows sold dearer this week, gaining 30c/kg and more on the rates of a fortnight ago. Heifer categories sold 10-30c/kg better, offering improved quality. Yearling feeder cattle again showed a dearer tend, while the heavier trade weights to domestic processors were mostly firm to slightly easier in places. A full complement of buyers assisted category prices to lift across the board.

Did you know...

When implemented correctly, low-stress cattle handling uses natural animal behaviour instead of force to ask cattle or other livestock to move where you want them to go. The only cost associated with low-stress cattle handling is the time required to learn the techniques.

The advantages of low-stress cattle handling include increased profit for dairy and beef producers. Low-stress cattle handling is easier and safer for people, induces less cattle stress and injury, and produces a better product with a better public image.
