### Did you know?

When transporting livestock, it's essential that they are prepared and managed in a way that reduces stress and minimises risks to animal welfare.

Producers, agents, transporters and buyers must understand their roles and responsibilities when transporting livestock to comply with the Australian Animal Welfare Standards and Guidelines for the Land Transport of Livestock and relevant state and territory legislation.

Here, you will find information to help you decide if an animal is fit to be loaded for transport by road or rail.

<https://publications.mla.com.au/login/eaccess?eink=53CBD1EC44F5F3FD8691DC77>

### What is the chain of responsibility?

The chain of responsibility for livestock welfare in the transport process includes:

1. The **consignor** for the assembling and preparation of livestock, including the assessment and selection as 'fit for the intended journey', feed and water provisions, and time off feed and water before loading.
2. The **transporter** for the journey, which involves the loading, including final inspection as 'fit for the intended journey', the loading density, inspections, and spelling periods during the journey, and unloading.
3. The **receiver** after unloading.
